A Short Introduction

This is a generic format of a short abstract for the 30 years of 4D seismic on the Norwegian Continental Shelf Seminar. Please provide brief descriptions about your talk. (minimum: main topic and purpose, clarity of focus & applications (Technology/Acquisition/Processing/Analysis/Integration, and Business impact) **Please limit your texts to no more than 200 words.**

In the last 4 decades, major technological improvements have led to a giant leap in our approach of reservoir modelling, in particular thanks to a more generalized used of 4D seismic in integrated reservoir characterization. This workshop will be an opportunity to attend case studies and short tutorials, offering a holistic approach of 4D. At the dawn of digital era, let's gather to learn back from our experiences and share our vision for the future of 4D seismic!
